

Navajo Abandoned Uranium Mine

Site Screen Report

This form is for use at the site of abandoned uranium mines (AUM) located on Navajo Nation lands. Applicable sites include all mine and mine features that have or have not undergone reclamation by the Navajo Abandoned Mine Lands Reclamation Program, including features, adits, pits and waste piles. Applicable sites also include all AUM sites listed in the USEPA CERCLIS database, all sites listed in the 2008 AUM GIS Report issued by USACOE and USEPA, all AUM sites on allotment lands associated with the Navajo Nation, and any and all AUM sites not listed in any database located on Navajo lands. Reconnaissance of any sites located on lands adjacent to Navajo lands that may be impacting Navajo lands will need to be coordinated with the authorities appropriate to those lands.

The purpose of the form is to ascertain the status and location of the identified AUM site, and record all immediate site information associated with the mine site. Decisions and recommendations on what additional steps are needed will be provided on a separate document.

Part II Summary of Radiological Readings

Mine ID: 801

Highest gamma radiation measurement: 95,857 counts per minute (cpm)

Background Average: 9,211 cpm

Two Times Background: 18,422 cpm

Describe any other radiological measurements:

A total of 288 gamma radiation measurements were collected from the mine site, ranging from 11,145 cpm to 95,857 cpm. Measurements were collected throughout the mine site, but due to a corrupted file only 288 measurements were recorded. The measurements are represented in Figures 1 and 2.

Distribution Chart and Statistics:
